

Basic course AMR

Three educational **and** inspiring afternoons on one of the major global health and food safety issues!

“Compliments for excellent course”

“Very interesting and usable”

“So important to speak to people from different sectors on AMR”

Antibiotic resistance / AMR

Antibiotic resistance, also known in a broader context as AMR, is a fast-growing but heavily underestimated global problem. By now worldwide 700,000 people die from the consequences of AMR every year. In Europe, there are 25,000 deaths per year and avoidable costs of around €1.5 billion. The Review on Antimicrobial Resistance envisages that in 2050 some 10,000,000 people will die every year from AMR, making it the biggest cause of death by then.

PRACTICAL INFORMATION:

12, 16 March & 5 April,
2018
14:00-17:00

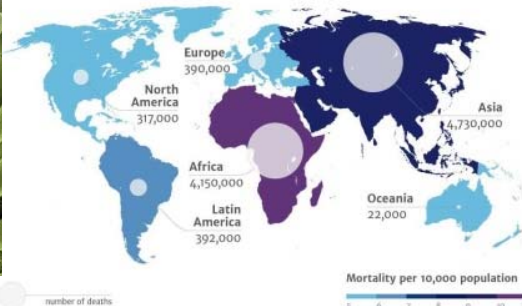

‘De Twee Marken’
Tromplein 5
3953 CR Maarn

(On 5 minutes walk from railway station Maarn)

Kosten: € 345 (ex BTW)
