Currently available databases AMR

Key strategy	R&D	Antimicrobials usage	Antimicrobial resistance
Prevention Infectious diseases			
Antimicrobial Stewardship			
Improved Diagnostics			
Novel Antimicrobials			
Other Antimicrobial Strategies			

Currently available databases AMR (1)

Key strategy	R&D	Antimicrobials usage	Antimicrobial resistance
Prevention Infectious diseases			GLASS, NARMS, Surveillance Atlas, CARD, MARAN, Nethmap, EARS-Net, Pfizer Atlas etc
Antimicrobial Stewardship			
Improved Diagnostics			
Novel Antimicrobials			
Other Antimicrobial Strategies			

GLASS

Global Antimicrobial Resistance Surveillance System (WHO)

- > Extent & burden of AMR globally
- > Emerging resistance & int. spread
- > Assess impact interventions

NARMS

National Antimicrobial Resistance Monitoring System for Enteric Bacteria (CDC)

- > Emerging bacterial resistance
- > Spreading resistance
- > Differences susceptible infections

Surveillance Atlas

Surveillance and disease data for antimicrobial resistance (ECDC)

CARD

Comprehensive Antibiotic Resistance Database (CAN)

- > Bioinformatic db resistance genes, their products and associated phenotypes

Currently available databases AMR (2)

Key strategy	R&D	Antimicrobials usage	Antimicrobial resistance
Prevention Infectious diseases			
Antimicrobial Stewardship		AWaRe, OAPR, ESAC-NET	
Improved Diagnostics			
Novel Antimicrobials			
Other Antimicrobial Strategies			

AWaRe

Access, Watch, Reserve (WHO)

- > Tool for antibiotic stewardship
- > Tool for antibiotic monitoring & use
- > Setting performance targets

OAPR

Outpatient Antibiotic Prescription Report (CDC)

- > Outpatient Antibiotic Prescription Report by Year and Interactive Database

ESAC-NET

European Surveillance of Antimicrobial Consumption Network (ECDC)

- > European reference data on antimicrobial consumption
- > Monitoring progress EU & EEA/EFTA prudent use antimicrobials

Currently available databases AMR (3)

Key strategy	R&D	Antimicrobials usage
Prevention Infectious diseases	Vaccine Pipeline Tracker	
Antimicrobial Stewardship		
Improved Diagnostics	Diagnostics Pipeline Tracker	
Novel Antimicrobials	WHO Antib.Clinical Development, Antibiotic DB, SPARK, PEW Abx pipeline, DB Acc.to Medicine Fnd, ECC Clin. Trials Register, CO-ADD	
Other Antimicrobial Strategies		

Vaccine Pipeline Tracker

World Health Organisations (WHO)

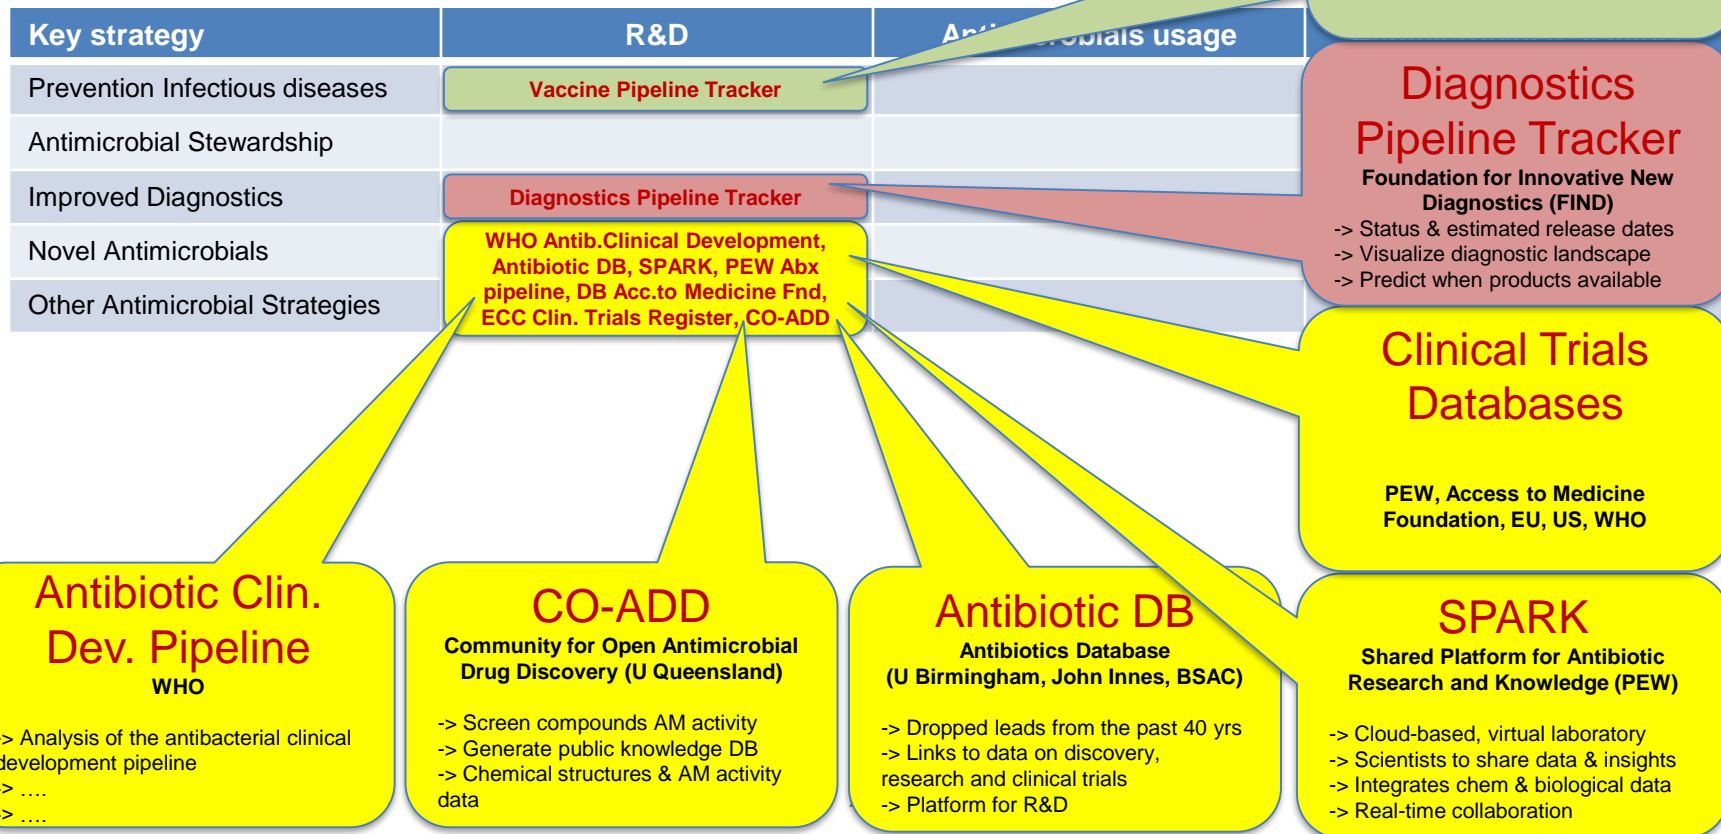

- > Candidate vaccines in development
- > List will be expanded in future

Diagnostics Pipeline Tracker

Foundation for Innovative New Diagnostics (FIND)

- > Status & estimated release dates
- > Visualize diagnostic landscape
- > Predict when products available

Currently available databases AMR (3)

Synergizing global R&D Antimicrobials Databases

- Combating Antimicrobial resistance (AMR)
- Databases & AMR
- **Provider perspective:**
 - **WHO**
 - **CO-ADD**
- User perspective:
 - Global R&D Hub
 - JPIAMR
 - AMR Centre
- Synergizing databases

WHO's work on antimicrobial stewardship (AMS)

A strategy and coherent set of actions to promote using antimicrobials responsibly

Tools

- WHO EML AWaRe classification
- A practical toolkit for AMS in health-care facilities in LMICs
- E-learning - AMS: A competency-based approach
- Methodology for AMC and PPS at facilities
- Training of trainer materials: AMS/IPC

Network: Launch of a global online network on AMS

- Database of tools and e-learning resources
- Community of practice, information sharing, mentoring etc.

1st Global AMS partners meeting, 24-26 Feb 2020

- Prioritization and development of further tools

Link to the WHO toolkit:

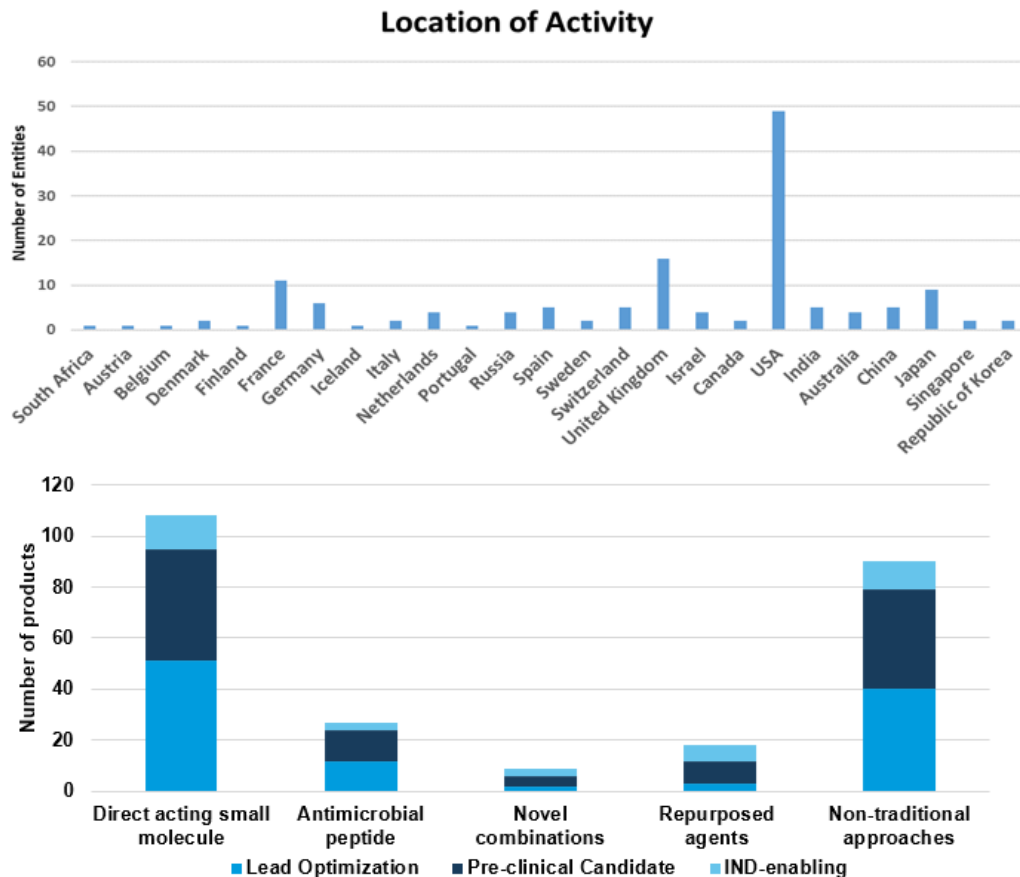

<https://apps.who.int/iris/bitstream/handle/10665/329404/9789241515481-eng.pdf>

WHO Pre-clinical antibacterial pipeline

- **Phases:** Lead optimization – IND enabling studies
- Biennial WHO online data call supplemented with information from different stakeholders
- 1st report to be published in Dec 2019
 - **145 individual entities & 252 products**

Data: WHO Global Observatory on Health R&D

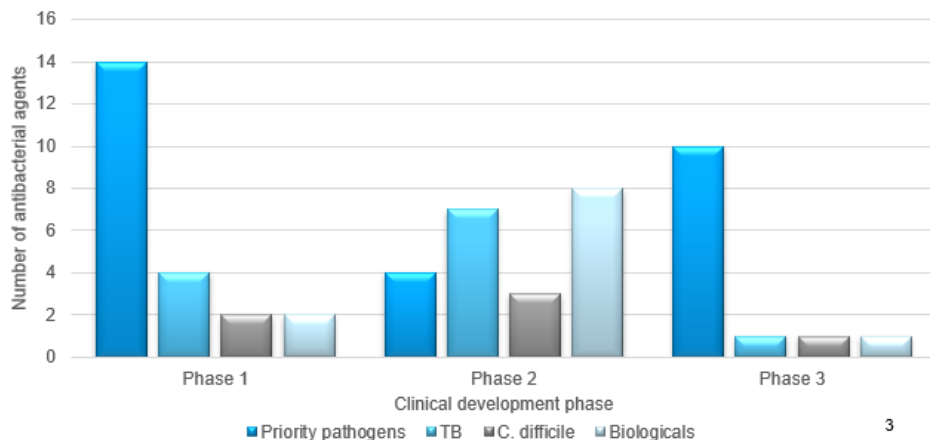

WHO Clinical antibacterial pipeline

- Annual analysis of the clinical pipeline
- WHO Advisory group
- Assess:
 - **Antibiotics and biologicals:** phase I–III clinical trials with activity against WHO priority pathogens, TB and *C. difficile*
 - **Innovation:** absence of cross-resistance to existing antibiotics; new chemical class; new target; or new mechanism of action.
 - **Data:** WHO Global Observatory on Health R&D
 - https://www.who.int/research-observatory/monitoring/processes/antibacterial_products/en/

2019: 50 new antibacterials targeting PPL, TB and *C. difficile*:

- **32** targeting PPL:
 - **6** innovative – 2 active against critical gram-negatives: taniborbactam (ph3), VNRX-7145 + ceftibuten (ph1)
- **12** targeting TB and nontuberculous mycobacteria
 - **7** innovative
- **6** targeting *C. difficile*
- **11** biologicals

 - **AMR Centre**
- Synergizing databases

Global AMR R&D Hub's Dynamic Dashboard

- Collects and presents AMR R&D projects and investments from across the world and all One Health sectors (but not results of research)
- Also displaying pipeline information and the incentive landscape
- Updated as close to real time as possible
- High-level analysis and access to project level information

AMR Research Funding Dashboard

Welcome to the JPIAMR AMR R&D investments dashboard, an interactive tool for exploring public investments in antimicrobial resistance (AMR) research from 22 JPIAMR member countries, the European Commission and Wellcome Trust for the year 2017. The dashboard allows users to examine national competitive grants data (institutional funding is not included) by agency, country, AMR research priorities (as defined in the JPIAMR Strategic Research Agenda) and individual research projects.

- Report of the Mapping of AMR Research Funding (2017) is available [here](#).
- Article on the previous Mapping of AMR Research Funding (2014) is available [here](#).
- Export data from the excel file [here](#).
- Read more on mapping of AMR research funding [here](#).

Total investment (M€)

1 794

Data reflects only reported total national investment in AMR research.

Investment data from Amed (Japan) and Aprosco (Switzerland) is not represented as specific funding of each AMR project could not be obtained.

Total number of projects

1 939

Projects per resistance area

Select the specific resistance area to see detailed information.
Projects involving multiple areas may be duplicated.

Projects per priority area

Select the specific research area to see detailed information.
Projects involving multiple areas may be duplicated.

Information

Data

Connection to data

- Aggregate data
- Facilitate data and information mining
- Connect users to resources
- Hub-like functionalities

Connection to people

- Facilitate people-people interactions
- Connect individuals to communities
- Relationships and Networking building
- Visibility

Call to action

- Facilitate mobilization around issues
- Achieve shared goals
- Outcomes

The user perspective: AMR Centre

➤ User friendly

- Large spreadsheet like data difficult to navigate => **searchable!**
- Achievable with a comprehensive database?

➤ Structures

- Medicinal chemists always like to see chemical structures if possible.

➤ Open source

- Possible to create a completely Open Source database that doesn't infringe on IP?

➤ Consistency

- Different names used for enzymes => made uniform for a database

➤ All data is good data

- 'Negative' data needs to be reported more often and included in databases. Why did a project fail? Why might one target be better than another?
- Much information on why projects fail is often 'soft' information. Is there a way for this knowledge to be shared?
